🎮 CODEALPHA TASK 1 – HANGMAN GAME

🎯 OBJECTIVE

The objective of this project is to develop a simple text-based Hangman Game using Python. The game allows users to guess a hidden word one letter at a time while improving understanding of Python programming fundamentals.

📁 PROJECT DESCRIPTION

The Hangman Game contains:

* Random word selection

* User letter input

* Word guessing mechanism

* Limited incorrect attempts

* Win/Lose conditions

👉 Maximum Incorrect Guesses Allowed: **6**

🛠️ TOOLS USED

* Python 🐍

* VS Code 💻

📊 GAME FEATURES

📌 1. Random Word Selection

A random word is selected from a predefined list.

📌 2. Letter Guessing

The player enters one letter at a time to guess the hidden word.

📌 **3. Chance Tracking**

The game allows only 6 incorrect guesses.

📌 **4. Win/Lose Conditions**

The game ends when:

* The player guesses the word correctly ✅
* All chances are exhausted ❌

📚 CONCEPTS USED

✔ Random Module

✔ Lists

✔ Strings

✔ While Loop

✔ Conditional Statements

✔ User Input Handling

📈 KEY LEARNINGS

✔ Understanding Python basics

✔ Working with loops and conditions

✔ Using lists and strings effectively

✔ Building interactive console applications

✔ Improving logical thinking and problem-solving skills

💡 INSIGHTS

* Python can be used to create interactive games with simple code.

* Random module helps generate dynamic gameplay.

* Loops and conditions are essential for game development.

* User interaction makes applications more engaging.

🏁 CONCLUSION

The Hangman Game successfully demonstrates the implementation of core Python programming concepts through a fun and interactive word guessing game. This project helped strengthen problem-solving skills and practical Python knowledge.

📸OUTPUT

```
Word: _ a _ _ _
Enter a letter: w

Word: w a _ _ _
Enter a letter: t

Word: w a t _ _
Enter a letter: e

Word: w a t e _
Enter a letter: r

Congratulations! You Win!
The word was: water
```

✔ Hidden Word Display

✔ User Guesses

✔ Remaining Chances

✔ Winning Message
